Mersen Announces Latest PIQ Quiz Challenge

Participants can test their knowledge of the new photovoltaic circuit protection UL standards and enter to win a $100 gift Card.

Mersen, formerly Ferraz Shawmut, recently published a new Protection Intelligence Quotient (PIQ) Quiz on the new UL standards for photovoltaic circuit protection. This is the latest quiz in an ongoing program which challenges participants to see if they are up to speed on the best practices in electrical safety. The quiz is online at http://us.ferrazshawmut.com/PIQPR [1]. Participants may take the quiz and enter to win a $100 gift card. Three winners are selected every month. No purchase is necessary.

With the educational PIQ program, solar power design engineers, specifiers, electrical professionals and equipment manufacturers discover how much they know about the hazards that can harm people, equipment and investments.

“We are clearly filling a need for circuit protection and safety information,” said Stephen Colvin, Vice President of Marketing at Mersen. “Many visitors take the latest quiz, and then move on to take earlier archived quizzes on topics such as arc flash hazard protection, overvoltage protection, and selective coordination.” To review earlier quizzes and download the PIQ Quiz Notes visit http://us.ferrazshawmut.com/PIQarchive [2].

For further details on the PIQ Quiz program, please send a request to info.nby@mersen.com [3], or visit http://us.ferrazshawmut.com/PIQPR [1]. The 2011 program runs through Dec. 31, 2011.
