Acculogic Purchases Teradyne TestStation LX System

WOBURN, MA ? February 2011 ? Acculogic's Test Programming Services (TPS) Division, a global leader in electronics test production solutions and advanced ATE test program development services, has selected the Teradyne TestStation LX to complement its extensive lineup of Teradyne and Agilent In-Circuit Test (ICT) systems.

The new TestStation will be deployed at Acculogic's Woburn, Mass. Center of Excellence for Teradyne/GenRad systems. The system enables high-quality testing of the latest printed circuit board technologies. Configured with 7,680 test points, the TestStation LX is the highest capacity ICT solution on the market.

"The high-performance capabilities of the new TestStation system, including embedded Safetest Protection Technologies that provide un-paralleled voltage accuracy and unique backdrive current measurement features, are important requirements for accurate, reliable and safe power-up testing of today's low-voltage devices," said Ben Favaloro, General Manager of Acculogic's Woburn facility.

Acculogic's test engineering teams are among the best and most experienced in the industry, motivated by one goal: to help its customers succeed. The team includes a strong, balanced group of test and measurement engineers, software developers, hardware designers and support technicians.

Acculogic's TPS supports the most widely used ICT platforms (from Acculogic, Agilent and Teradyne) in its state-of-the-art multi-location test development laboratories. The TPS Group is staffed by a highly skilled team of engineers with an impressive track record in providing test solutions to customers in numerous industries.
