productronica 2011: EMS Know-how at Booth 142 in Hall B1

Jena, Germany - November 3, 2011 - MAZeT GmbH will be presenting their comprehensive range of services as Electronic Manufacturing Services (EMS) company during the PRODUCTRONICA trade fair in Munich; Hall B1/142. With over 40 expert engineers, MAZeT concentrates on providing development and design services ranging from mixed signal ASICs to embedded computing solutions. Last but not least customized serial production in small or medium quantities, supervision services and broad after sales services demonstrate MAZeT's expertise.

The main focus of MAZeT is innovative electronic devices for usage within medial systems, mechanical engineering as well as industrial electronic solutions. Short development periods, high product quality and long term durability are trademarks of the MAZeT GmbH.

MAZeT is known for their customized embedded computing solutions with compact design and state of the art technology while regarding specific standards (like DIN ISO 13485) in the field of medical engineering.

In the field of LED applications, MAZeT presents various customizable design and manufacturing solutions for controlling long term and temperature-stable LED light.

MAZeT is a specialist in designing opto-electronic ASICs for industrial or medical applications, including modules with integrated optics and customized packaging solutions. The advanced test labs allow various opportunities for optical and electronic testing procedures of modules and components during shifting conditions, like temperature, humidity or other climatic challenges.
