UK calibration service covers all EMC test products and antennas

ECN Europe

Teseq [1] now has UKAS accreditation for on-site calibration of all EFT, PQT, Surge, pulse generators, Harmonic & Flickers analysers and offers “no down time” antenna calibration in its new purpose built chamber, avoiding delays caused by weather on open-field test sites. [2]

Accreditation underwrites the competence of a calibration laboratory and provides confidence in all certificates and reports issued due to the implementation of widely accepted criteria set by the European (CEN) or international (ISO) standardisation bodies. These standards address issues such as impartiality, competence and reliability ensuring confidence in the compatibility of certificates and reports across national borders.

EMC calibration services provided by TESEQ include; harmonic and flicker calibration, magnetic field immunity generator calibration and a complete solution for EMC/RF calibration. For customer convenience TESEQ provide a door-to-door collection and delivery service of equipment for calibration.

TESEQ own 7 calibration laboratories around the world, 6 of which have National and International accreditations. Five of the seven TESEQ calibration laboratories are accredited by the following national accreditation authorities to EN ISO/IEC 17025 which is the latest international standard specifically addressing the performance of calibration laboratories.
