Magnalight.com adds Explosion Proof LED Paint Spray Booth Cart Light

Larson Electronics' magnalight.com unveiled an explosion proof LED paint spray booth cart for hazardous location areas. The four foot four lamp Class 1 Division 1 and Class 2 Division 1 LED light is mounted on a stainless steel cart with casters and is equipped with a power cord, wire guard and explosion proof switch. The EPLC-48-4L-LED explosion proof LED light cart is made in the USA.

Larson Electronics' magnalight.com added a new explosion proof LED paint spray booth cart [1] to its evolving line of hazardous location area lights [2]. The four foot, four lamp EPLC-48-4L-LED explosion proof LED light cart is equipped with 96 watts of LED lighting within a heavy duty aluminum housing and Pyrex lens. Mounted on a stainless steel cart with non-sparking casters, the four lamp hazardous location light can be positioned to face any angle, including straight up. The mobile cart is equipped with a power cord and explosion proof switch. Carrying a UL certification of Class 1 Division 1 and Class 2 Division 1, this explosion proof light [3] cart is suitable for environments with hazardous vapors or explosive dusts. Most importantly, the T6 temperature rated explosion proof LED light cart carries a paint spray booth certification.

By developing more explosion proof LED lighting for portable applications, we enable operators to position highly efficient, true color lighting next to objects within spray and coating booths, said Rob Bresnahan, with Larson Electronics' magnalight.com. "The EPLC-48-4L-LED explosion proof paint spray booth cart gives operators more usable light than they get from our T5 bulb equipped model. With true color light output, protective wire guard and significantly lighter weight than our ballast equipped fluorescent cart (EPLC-48-4L), operators can benefit from

significant improvements and portability," Rob concluded.

Larson Electronics' magnalight.com provides a wide array of explosion proof lighting, including models certified for paint spray booth applications. Including a wide range of surface mounted, portable and handheld Class 1, Class 2 and paint spray booth certified lights for hazardous location areas, magnalight.com has become a one stop shop for military, manufacturing and petrochemical operators worldwide.
