Stepping motors have option for an encoder

Oriental Motor is pleased to announce that encoder options are now available for their 0.36 º and 0.72 º stepping motors. With the addition of the encoder option to 0.36 º and 0.72 º stepping motors, Oriental Motor's entire range of stepping motors (including 0.9 º and 1.8º stepping motors) now has the option for an encoder. Additionally, the stepping motors are available as a stepping motor only or as a stepping motor and driver package.

The new stepping motor encoder options for 0.36 º and 0.72 º motors are:
• 500 or 1000 pulses/rev
• 2 or 3 channel
• TTL or Differential (line driver type)

For 0.36 º and 0.72 º stepping motor and driver packages, Oriental Motor has introduced the CRK stepping motor and driver package. The CRK stepping motor and driver package highlights include:

• Pulse input 24 volt driver
o 500 or 1000 pulses/rev
o 2 or 3-channel TTL type encoders
• Built-in controller type
o 500 or 1000 pulses/rev
o 3-channel differential line driver type encoders

Oriental Motor's ever-expanding offering of stepping motor products offer a wide selection of stepping motors to meet the needs of applications requiring open loop or closed loop operation and geared or non-geared options. Visit our website to see our complete line of stepping motor products with and without encoders at http://orientalmotor.com/products/ac-dc-step-motors/index.html [1]
