Slight Increase in First Quarter 2012 Silicon Wafer Shipments

SEMI

Worldwide silicon wafer area shipments increased slightly during the first quarter 2012 when compared to fourth quarter 2011 area shipments according to the SEMI Silicon Manufacturers Group (SMG) in its quarterly analysis of the silicon wafer industry.
Total silicon wafer area shipments were 2,033 million square inches during the most recent quarter, a 1 percent increase from the 2,009 million square inches shipped during the previous quarter. New quarterly total area shipments are 11 percent less than first quarter 2011 shipments.

"The first quarter of the year tends to be a time for seasonal softness for silicon shipment volume, though quarterly shipments did improve some compared to the fourth quarter" said Dr. Bruce Kellerman, chairman of SEMI SMG and senior director of Semiconductor Product Marketing at MEMC. "With modest growth forecasted for the semiconductor industry in 2012, we are optimistic that positive momentum will continue for silicon shipments."

Quarterly Silicon Area Shipment Trends

Semiconductor Silicon Shipments* - Millions of Square Inches

	Million of Square Inches		
	Q1 2011	***Q4 2011***	***Q1 2012***
TOTAL	2,287	2,009	2,033

**Shipments are for semiconductor applications only and do not include solar applications*

Silicon wafers are the fundamental building material for semiconductors, which in turn, are vital components of virtually all electronics goods, including computers, telecommunications products, and consumer electronics. The highly engineered thin round disks are produced in various diameters (from one inch to 12 inches) and serve as the substrate material on which most semiconductor devices or "chips" are fabricated.

All data cited in this release is inclusive of polished silicon wafers, including virgin test wafers, epitaxial silicon wafers, and non-polished silicon wafers shipped by the

wafer manufacturers to the end-users.

The Silicon Manufacturers Group acts as an independent special interest group within the SEMI structure and is open to SEMI members involved in manufacturing polycrystalline silicon, monocrystalline silicon or silicon wafers (e.g., as cut, polished, epi, etc.). The purpose of the group is to facilitate collective efforts on issues related to the silicon industry including the development of market information and statistics about the silicon industry and the semiconductor market.

About SEMI

SEMI is the global industry association serving the nano- and microelectronics manufacturing supply chains. SEMI member companies are the engine of the future, enabling smarter, faster and more economical products that improve our lives. Since 1970, SEMI has been committed to helping members grow more profitably, create new markets and meet common industry challenges. SEMI maintains offices in Beijing, Bengaluru, Berlin, Brussels, Grenoble, Hsinchu, Moscow, San Jose, Seoul, Shanghai, Singapore, Tokyo, and Washington, D.C.
