How the physics of champagne bubbles may help address the world's future energy needs

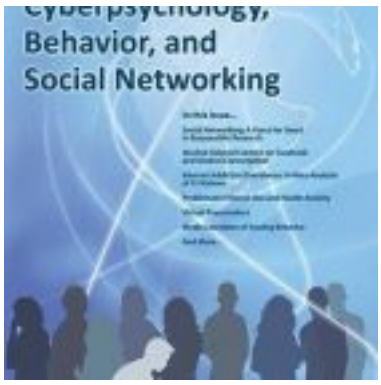
December 18, 2014 1:06 pm | by EurekAlert! | Comments

Uncork a bottle of champagne, and as the pressure of the liquid is abruptly removed, bubbles immediately form and then rapidly begin the process of "coarsening," in which larger bubbles grow at the expense of smaller ones. This fundamental nonequilibrium ...

Comics plus engineering equals a national award

December 18, 2014 1:01 pm | by EurekAlert! | Comments

A University of California, Riverside assistant professor who is an expert on the science of superheroes will receive an award from a national engineering organization that was previously won by military leaders, a congressman, a Secretary of Defense and astronauts, including ...



Internet addiction affects 6 percent of people worldwide

December 18, 2014 12:57 pm | by EurekAlert! | Comments

Internet addiction is an impulse-control problem marked by an inability to inhibit Internet use, which can adversely affect a person's life, including their health and interpersonal relationships. The prevalence of Internet addiction varies among regions around ...

Drones might help show how tornados form

December 18, 2014 10:48 am | by DAN ELLIOTT, Associated Press | Comments

Researchers say they have collected promising weather data by flying instrument-laden drones into big Western and Midwestern storms. Now, they want to expand the project in hopes of learning more about how tornadoes form. Drones can penetrate parts of ...

Stolen emails reveal lapses in Sony security practices

December 18, 2014 10:41 am | by TED BRIDIS, Associated Press | Comments

In the weeks before hackers broke into Sony Pictures Entertainment, the studio suffered significant technology outages it blamed on software flaws and incompetent technical staffers who weren't paying attention, even as hackers targeted executives to ...
