Precision 7-16 DIN Adapters Hold up to Frequent Torquing

7-16 DIN adapters are highly desired in test applications such as base station passive intermodulation (PIM) testing. These low loss, low VSWR “rugged” adapters are designed to be used with portable antenna and cable analyzers. Anritsu’s Site MasterTM, Summitek’s SITM series and Boonton’s PIM testers are examples where high grade DIN adapters are used. Some features include Stainless Steel coupling nuts, White Bronze plated bodies for tarnish free service, superior electrical performance and low PIM. White Bronze plating offers a non-magnetic solution while retaining high conductivity in the conductor paths. Engineered for long life in field applications, they are also suitable for lab environments. All 7-16 DIN adapters are machined to exacting specifications and stand up to the competition, surpassing expectation when compared to typical Silver plated products. Test charts included. Parts available are:

• P2RFD-1670-SS: 7-16 DIN Male to N Male; White Bronze, Stainless Steel Coupling Nut

• P2RFD-1671-SS: 7-16 DIN Male to N Female; White Bronze, Stainless Steel Coupling Nut

• P2RFD-1672-SS: 7-16 DIN Female to N Male; White Bronze, Stainless Steel Coupling Nut
