

Would you like parts with those frys?

Screaming Circuits

In days of yore (last month), the PCB design process would more or less start with the schematic. (I'm ignoring all of the work that has to take place before the schematic) The bill of materials would typically come together during the schematic phase and get refined during PCB layout.

After that, it would be time to enter your bill of materials, a line at a time, into a parts website, upload your Gerbers to Sunstone Circuits for boards and then (hopefully) send the boards, parts and files to Screaming Circuits for assembly. If you're hand soldering, you might skip the last step. We hope you don't, but certainly understand if you do.

But here's something new:

At the Screaming Circuits website, you can now quote and order all three in real time.

1. Quote the assembly labor
2. Quote the cost of Sunstone PCBs
3. Upload your BOM and quote parts

If it looks good to you, you can place the order right then and there. Of course, we still have folks to talk things through on the phone if you have questions or need non-standard services, but if you like what you see, it's a real quote and real order. No waiting for an email quote back. No going to three websites.

As always, we'll happily build as few as one board or up into the thousands (or hundreds of thousands in our EMS division). Once we have your parts and boards, we can assemble it all in as little as one day.

Would you like parts with those fries?
