

Condition Monitoring Services is now a distributor of Fluke Thermal Imagers

1888 Press Release

Condition Monitoring Services Inc. is now distributing the popular Ti line of Fluke Thermal Infrared cameras. Along with matching any advertised price for these units, onsite delivery and setup support is included in the cost.

By offering an onsite demonstration and training session upon purchase, plant managers can rest assured that all personnel is adequately prepared to utilize the Fluke unit for maximum efficiency. Units range from low-cost starter cameras to professional high-end imagers and are useful for many different applications, including: moisture detection, insulation issues, MCC and power pole electrical scans, and heat surveys of hard to access equipment.

A unique feature onboard these units is Fluke's patent pending IR Fusion technology. This technology blends visible light images with IR images to create a unified glimpse that allows accurate pinpointing of trouble spots. There are five different viewing options within the unit, including: full infrared, full visible light image, picture-in-picture, auto blending, and visible alarm. The visible alarm feature is advantageous in that it is mostly a digital photo with the exception of any temperature levels that exceed preset alarm levels. These areas are marked in IR red, allowing the user to immediately understand where the heat is coming from. IR Fusion technology saves time by ensuring that repairs are done correctly the first time.

Purchase a Fluke Thermal Imager through our online store, or browse over a thousand other equipment reliability products in many categories, including accelerometers, shaft alignment tools, vibration monitors and accessories, and vibration training software. All major credit cards are accepted, and most products arrive within two to three business days after order is complete. Fluke units receive free priority two-day shipping and a free training session by one of our experienced field technicians at no additional cost. Bundled pricing packages are available for customers interested in purchasing a Fluke 810 Vibration Tester as well.

Condition Monitoring Services is an authorized dealer for Fluke Vibration Testers and Infrared cameras, in addition to being a Western United States predictive maintenance company specializing in vibration testing and analysis, infrared inspection and report generation, emission compliance testing, laser alignment services, and oil analysis. CMS strives to make condition monitoring easier for all industries by ensuring clients are purchasing the "best fit product" for their application coupled with options for onsite support and training. ###
