

Eseye opens US office to support Smart Metering customers in the Americas

October 2011 London: Eseye have today announced the opening of their office in Connecticut, New York, complementing the staff in the UK and European offices.

During the year Eseye have seen rapid growth in their Smart Metering business in the US. These new customers require metering devices to be installed all over the world so these customers can no longer be satisfied with a single local carrier. Now customers demand the 'fit once, connect anywhere' solution that Eseye is providing.

Paul Marshall, COO at Eseye, said today 'We are really excited by the success we have had in the US with our AnyNet SIM and the freedom to switch network operator that gives to the customer. Our Embedded SIMs or Chip SIMs have also been very well received over here because we can tailor their specification to provide precisely the value added services demanded by the customer's M2M applications . Opening an office in the US will give us a base to really build on this success as well as provide more personal technical and commercial support to our customers here'.

Eseye are a Machine to Machine (M2M) service provider with their own infrastructure (APN) and multiple operator interconnect agreements. What makes them different is their world class expertise in product engineering and systems integration. So they have the necessary expertise to assist you with getting your devices connected using mobile technology. And with customers around the world in multiple market segments such as; Security, Healthcare, Smart Metering, Renewable Energy and Automotive, they have the commercial know-how to ensure your business gets the best value out of their technical expertise.
