

# Hertz First to Trial Wireless EV Recharging

PowerPulse.net

The **Hertz Corporation** and **Hertz Global EV** are implementing the first wireless charging system for electric vehicles (EVs) in the car rental industry. Hertz has the most diverse fleet of EVs for both rental and carshare.

"Hertz is committed to its Global EV program, introducing electric vehicles into our rental fleet on three continents - North America, Asia and Europe," commented Mark P. Frissora, Hertz Chairman and Chief Executive Officer. "We're excited to participate in Plugless Power's pilot program so that we can be on the ground floor of this new technology; learning key findings about EV wireless charging. As we move forward our goal is to have a variety of charging options for EV customer use, aligned with the charging equipment installed by EV manufacturers."
