

SEMI Announces Silicon Wafer Shipment Forecast

SEMI

SAN JOSE, Calif. — October 8, 2012 — SEMI recently completed its annual silicon shipment forecast for the semiconductor industry. This forecast provides an outlook for the demand in silicon units for the period 2012-2014. The results show polished and epitaxial silicon shipments totaling 8,901 million square inches in 2012, 9,400 million square inches in 2013, and 9,965 million square inches in 2014 (please refer to below table). Total wafer shipments are expected to remain below the all-time high set in 2010 this year but reach record levels in 2013 and 2014.

"In spite of heightened economic uncertainty, silicon shipments for the first half of 2012 were very promising," said Denny McGuirk, president and CEO of SEMI. "We expect 2012 silicon shipments to remain essentially flat when compared to 2011 and increase in 2013 and 2014."

2012 Silicon Shipment Forecast

Total Electronic Grade Silicon Slices* - Does not Include Non-Polished

(Millions of Square Inches)

	Actual		Forecast		
	2010	2011	2012	2013	2014
MSI	9,121	8,813	8,901	9,400	9,965
Annual Growth	39%	-3%	1%	6%	6%

**Shipments are for semiconductor applications only and do not include solar applications*

Silicon wafers are the fundamental building material for semiconductors, which in turn, are vital components of virtually all electronics goods, including computers, telecommunications products, and consumer electronics. The highly engineered thin round disks are produced in various diameters (from one inch to 12 inches) and serve as the substrate material on which most semiconductor devices or "chips" are fabricated.

All data cited in this release is inclusive of polished silicon wafers, including virgin test wafers and epitaxial silicon wafers shipped by the wafer manufacturers to the end-users.

The Silicon Manufacturers Group acts as an independent special interest group within the SEMI structure and is open to SEMI members involved in manufacturing polycrystalline silicon, monocrystalline silicon or silicon wafers (e.g., as cut, polished, epi, etc.). The purpose of the group is to facilitate collective efforts on issues related to the silicon industry including the development of market information and statistics about the silicon industry and the semiconductor market.

SEMI is the global industry association serving the nano- and micro-electronic manufacturing supply chains. Our 2,000 member companies are the engine of the future, enabling smarter, faster and more economical products that improve our lives. Since 1970, SEMI has been committed to helping members grow more profitably, create new markets and meet common industry challenges. SEMI maintains offices in Beijing, Bengaluru, Berlin, Brussels, Grenoble, Hsinchu, Moscow, San Jose, Seoul, Shanghai, Singapore, Tokyo, and Washington, D.C.
