

The Tinker's Toolbox - Jeff Klaus of Intel

Submitted by Guest (not verified) on Mon, 03/26/2012 - 12:35pm

Tinker's Toolbox returns to the data center with Jeff Klaus, Director of

Data Center Solutions at Intel. Workload, power consumption, thermal management and energy efficiency are always concerns in the data center, and Jeff will tell us what enterprise managers have been reporting as their biggest concerns. We'll discuss what data center infrastructure vendors such as Intel are offering to address these issues, with emphasis on the company's new Data Center Manager (DCM) solution. And we'll dive into the lack of OEM standards for data collection and what could be done about it. With Jeff's insight, we cover a lot of ground in this Toolbox.

In addition to this Toolbox podcast, you can learn more about Intel's DCM solution at www.datacentermanager.intel.com [1].
