

## Small Direct Drive Rotary Servomotors

Danaher Motion adds three frame smaller sizes to its family of Cartridge DDR direct drive rotary servomotors. Available in five frame sizes ranging from 4.25" square to 13.78" square with four stack lengths per frame, these motors feature pre-engineered components, an integrated, factory-aligned high resolution feedback device and a bearing-less design that facilitates maintenance-free mount-and-run operation in under 30 minutes. CE marked and UL listed for global application, the motors are available with 240V, 400V and 480V voltage ratings for maximum design flexibility and robust operation. They provide 4.57 N-m to 510 N-m continuous torque, peak torque to 1,017 N-m and speeds to 2,500 rpm.
