

Data Acquisition Box for Harsh Applications

Hacker-DatenTechnik announces its MF16080-T series of small portable USB data acquisition boxes with an extended temperature range of -40°C to +105°C that are usable for a range of industrial, offshore and military applications. For OEM applications the inside PCB is also available separately with an extended temperature range of -40°C to +120°C. The card enclosure is made of 2 mm aluminum, providing exceptional shielding, maximum stability and durability for everyday use in the field. The card is equipped with an industry standard 37 pole DSUB connector and a mini USB device connector. There are no proprietary cables needed. The card is bus powered and requires less than 0.25W in operation.
