

Independent Universal SMT Contact

ITT Electronic Components releases its series of independent universal range of SMT contacts that provides an electrical connection between a device and a PCB. Manufactured as a single piece stamped product, incorporating pre-load and anti-lift features, these contacts have been designed to replace traditional interfaces where the contact is custom designed into the component. The contacts can be used to connect a number of device components in any direction and configuration using the same interface, reducing qualification time. The 1.3 mm version features a low profile. The range of universal contacts is available in heights of 1.3 mm (minimum pitch 1.35 mm), 1.8 mm (minimum pitch 1.25 mm), 2.5 mm (minimum pitch 1.35 mm), 3.5 mm and 4 mm (both feature minimum pitch of 1.45 mm).
