

Size 14, 0.9° Linear Actuators

Haydon Switch & Instrument's size 14 linear actuators are now available with a 0.9° step angle in all four designs: captive, non-captive, external linear, and linear rotary. Combined with a stainless steel lead screw, the linear actuator provides smooth, precise motion. This new step angle is designed for higher resolution and allows for a full step linear movement of 1.6 μ . The complete size 14 product line has resolutions ranging from 0.00006" (0.001524 mm) to 0.0025" (0.0635 mm) per step, with operational thrust capabilities of up to 50 lb. These models can also be micro stepped for finer resolution.
