

Stackable Plastic Electronics Enclosure

Bud Industries Inc. announced its first stackable plastic electronics enclosure. The Plasticase Style H enclosures has an interlocking design that allows them to be stacked several high without slipping. Applications include metering and monitoring, test equipment, controllers, lab equipment, medical equipment, and as an alternative to 19" racks. The front and rear panels slide out for easy modification by the end-user, for example, to add a keypad or display. The enclosures are customizable. The enclosures are constructed of self-extinguishing ABS plastic with a UL94V-0 flammability rating. Internal bosses allow for PCB mounting and the standard color is black. Units ship in 1.68" and 2.36" heights, and are 9.18" × 5.25". Prices start at \$8.35 for single units.
