

Versatile Enclosures for Modern Indoor Electronics

OKW have extended their ergonomically shaped 'ART-CASE' series with twelve additional models designed for modern indoor electronics. Typical applications will include transmission and reception units in building services, medical equipment, peripherals and security devices. The models include screw-on access plates on the base section, providing easier access to the battery compartment to replace the cells, or access to the electronics for servicing and calibration. The enclosures are offered in two versions: the round type 110 and the oval type 160. Both versions can be specified with a smooth domed top or a flat recessed top for fitting a membrane keypad or product label. The base sections can be horizontal or inclined at 30° or 60°. External dimensions range from 4.33" × 1.18" to 6.30" × 4.33" × 3.74".
