

Flexible Connectivity System with Insulation Displacement Blocks

Woertz announced its flexible connectivity system that uses a combination of insulation displacement technology and pluggable terminal blocks. This system provides rapid connections and expandability for power and data buses in industrial and commercial applications. Proprietary flexible power buses can handle up to 70A in flat cables with two to seven conductors. The data bus cables are available as shielded and unshielded for two- and four-wire field bus applications which include CAN, LON and EIB.
