

L-C Filter Arrays Suited for Wireless Handset Applications

California Micro Devices' CM1692 family of EMI filters based on the company's *Praetorian II* architecture is targeted for EMI filtering applications in wireless handsets. The product is based on an L-C filter architecture and features high cutoff frequencies of up to 400 MHz, stop band ranging from 800 MHz up to 3 GHz to cover all wireless communication frequencies, signal integrity rise times as low as 2 ns, minimal insertion loss (<-2 dB), and ESD protection up to ± 15 kV contact discharge per IEC61000-4-2 Level 4 specification.
