

Computer-on Module Targets Handheld and Mobile Equipment

Based on the high-performance Intel® Atom processor Z500 series, the RadiSys Procelerant Z500 addresses handheld and mobile applications with features such as 1GB memory, a MicroSD socket, and an extended input voltage range for battery power. Compatible with the Type 2 COM Express pin-out, the 85 mm × 70 mm module can pair with the RadiSys heatspreader/mechanical adapter to provide drop-in replacement for existing Basic Form Factor designs. Features include General Software Embedded BIOSR with accompanying design tools (supporting effective implementation of a smart battery subsystem and thermal management), SATA storage support, and Gigabit Ethernet network connectivity.
