

Power Rocker Switch Is Waterproof

Providing protection against dust and water up to IP55, the KND-2 power rocker switch from Phaseda uses a novel internal design without an external PVC cap. The weatherproof device snaps into an industry standard panel cut-out size 0.862" x 1.169" (22 mm x 30 mm) and contains a bi-color acuator making it suitable for applications where it is necessary to indentify the ON position of the switch. The RoHS-compliant switch's functions include DPST On.Off, momentary (On).Off; DPDT On.On, On.Off.On, (On) ON, and two sides momentary. The switch comes with 0.250" tab terminals for easy push-on assembly and is rated at 20 A at 125 VAC, 18 A at 250 VAC, and 20 A 36 VDC.
