

Connector Series Designed For Correct Alignment

From AVX, The 6288 Series of secure lock zero insertion force (ZIF) connectors features a shaped cable construction for correct alignment. The connector's one-touch flip lock provides "click" feedback, eliminates production process failures, and prevents accidental removal of the cable in the field. The connectors are suitable for automotive applications, including audio/visual devices, DVD and satellite navigation screens, digital speedometers, tachometers, and rear view mirror displays. The connectors can also be found in medical electronic applications such as handheld blood sugar monitors and LCD screens. The product is available in 6 to 60 positions with a standard 0.5 mm pitch and an operating temperature range between -40°C to +105°C.
