## Transducer Contains No O-rings

Performing with Krystal Bond technology, American Sensor Technologies' one-piece stainless steel AST20HA pressure transducer has no internal o-rings and exhibits 100-V/m EMI/RFI protection from electrical noise. The CE-approved device offers pressure ranges from 0 to 10,000 psi in compound ranges up to 2500 psi while operating in a temperature range from -40°F to 185°F. Ratiometric output options for the transducer include 4 to 20 mA, 1 to 5 V, 1 to 10 V and 0.5 to 4.5 V in applications such as test stands, military and aerospace vehicles and equipment, hydrogen filling stations and medical laboratories.
