

## Gearmotors Deliver 100 rpm

Acting as Von Weise drop-in replacements, Bison Gear & Engineering's VWDIR03 right-angle fractional horsepower gearmotors demonstrate output speeds from 4.5 rpm to 100 rpm. The UL- and CSA-recognized devices exhibit torques from 27 in./lbs to 250 in./lbs while being driven by a universal motor running from 115 VAC or 115 VDC. The 13 models offer left, right or double output shaft configurations, all position mounting and reversible 1/15 hp motor rotation.
