

Converter Range Satisfies Wide Power Levels

With output power levels from 0.25 W to 25 W, a range of DC-DC converters from Endicott Research Group come in 7 series. The output power determines the package series and size – E400, E500, E700, E800, E900, E1200, and E1600. The E712-5.06U is a 700 Series DC-DC converter that converts a 12 VDC input voltage to 500 VDC@6mA, unregulated. The converters are intended for applications such as an ink jet printer used for CAD drawings or medical data where each jet needs 85 VDC to operate and that voltage is not in the system. Pricing for the E500 and E700U Series is \$12.19 and \$13.35 respectively in 1,000 piece quantities.
