Handheld DMM Contains OLED Display

Expanding the U1250 Series, Agilent Technologies' U1253A handheld DMM utilizes an OLED display showing readouts with 2,000:1 contrast ratios, a 160° viewing angle, smoothed fonts, and a "large display" mode. The instrument offers 4.500-digit resolutions with 50,000-count full-scale dual display and basic accuracy of up to 0.025% on simultaneous measurements of validation tests, tolerance checks, and marginal-failure troubleshooting. The device includes temperature measurements, automated data-logging with an optional PC-interface cable, and a set of standard test leads and alligator clips. Pricing is \$499.
