

Connectors Transmit Data at 12.5 Gb/s

Coming in orthogonal and backpanel configurations, FCI's ZipLine connectors demonstrate data transmission speeds of up to 12.5 Gb/s. The products exhibit density of up to 101 signal pairs per linear inch at a column pitch of 1.5 mm, press fit termination, and similar signal integrity to FCI's AirMax VS products. The interconnects use hard metric design practice, and can be placed adjacent to FCI product families, including AirMax VS signal, power, and guides, and HCI power connectors.
