

LED Pilot Light Indicates in Critical Environments

Retrofitting and replacing common GE ET-16 sockets, DDP's PowerLine PL16 Pilot 16-mm LED pilot light includes a solid-state, bayonet-based LED lamp and a Lexan lens that resists impact in industrial plants and utilities. The device uses a shunt resistor to reduce transient current and prevent a false positive indication by the LED. The product comes in 24-V, 48-V, or 120-V designs with thermoplastics, an operational lifetime of up to 100,000 hours, and color choices of red, amber, blue, green, cool white, and warm white. The lights are UL listed for Type 1, 2, 3, 3R, 4/4X, 12, and 13. Pricing is \$29 each in 100 quantities.
