

Rear-Projection Display Supports HD Resolution

Targeting public venue video walls and space-constrained control rooms, Planar Systems' Clarity Margay II 50" rear-projection display offers support for full 1920 × 1080 HD resolution. The product includes Texas Instruments' DLP BrilliantColor technology, the Margay II optical engine with primary and secondary color segments, and Planar Precision electronics with digital uniformity correction and solid state image alignment. The display uses Planar's SiFi technology to automatically calculate and achieve consistent color and brightness, and automates critical color balancing functionality. The device incorporates full front and rear service access while maintaining a seamless, zero mullion screen design. MSRP starts at \$10,495.
