

RFID IC Monitors Temperature Throughout Shipping Process

Enabling logistics customers to monitor and record temperature and humidity throughout the shipping process, the ZMD41211 temperature logger and Smart Label RFID IC from ZMD AG has a built-in timer function. The temperature logger complies with ISO 15693 RFID technology and can be read and programmed with existing standard compliant systems. Temperature logging requires only an external coil and a 1.3 V battery. The ZMD41211 has 8 modes of temperature recording, and can log up to 720 temperature readings. The RFID link operates at 13.56 MHz with a range of 1 meter.
