## Solid State Relays Accept 6 AWG Wire

Complying with IEC IP20 touch safe regulation, Crouzet Solid State Relays' next-generation GN Series solid state relays offer a clear plastic cover accepting wire terminals suitable for up to #6 AWG wire with an unrestricted view of wire installation. The overall height of the RoHS-compliant and CE-certified devices have been reduced by 2 mm, compared to the last release of the GN Series. The components include a base plate for thermal conductivity, and an IP20 cover removable via a #1 flat-bade screwdriver.
