

Accelerometer Serves HUMS and AVC Applications

Designed to avoid ground loops, Dytran Instruments' Model 3232A2 piezoelectric biaxial accelerometer targets Health and Usage Monitoring Systems (HUMS) and Active Vibration Control (AVC) applications typically found on commercial and military aircraft. The accelerometer elements are mounted orthogonally within a bracket and are internally case isolated from the mounting surface. The unit has a radial 3-pin "Mighty Mouse" connector with a 5/16-28 thread, and 100-mV/g sensitivity. Pricing is \$750.
