Capacitors Deliver up to 3,000 Farads

Available in cylindrical or rectangular cases, a family of WIMA double-layer Supercaps from TAW Electronics are available with capacitances up to 3,000 Farads. Configured in models addressing the operating voltage required by the application, the maintenance-free devices can handle more than 500,000 charge/discharge cycles with a power efficiency of over 90% to replace batteries and other power sources in applications that are isolated or inaccessible.
