

## Current-Sense Resistors Exhibit Low Resistance

Showing resistance shifts of  $<0.5\%$  and  $< 0.25\%$  for short time overloads, Stackpole Electronics' BR Series bare-metal current-sense resistors exhibit resistance values down to 1 m $\Omega$ . The RoHS-compliant devices offer typ. inductance of  $\approx 1$  nH, sizes of 1 W, 3 W, and 5 W, TCR from 100 ppm to 20 ppm, and tolerances of 1%, 2%, and 5%. The radial-leaded, thru-hole components operate at temperatures up to 275°C, and suit high-current power supplies and power applications. From \$0.20 to \$0.47 each in min. quantities.
