

Fan Trays Operate at High Current

A variety of standard and custom fan trays from Orion Fans operate from 12 VDC to 48 VDC and 115 VAC to 230 VAC. The trays are available in 3-, 6- and 9-fan trays as well as custom configurations. Each fan may be equipped to adjust its speed in direct relation to the ambient air temperature between 55 percent and 100 percent of full speed. The trays are intended for telecom enclosures, free-standing servers, WiMax transmitters, and wide area networks (WANs).
