

Simulation System Touts High Capacity

Offering 3- or 6-sector configurations, Catapult Communications' LTE User Equipment (UE) Simulation test system demonstrates a UE capacity of up to 400 connected UEs per sector. The product supports maximum data throughput of up to 300 Mbps downlink per sector, up to 150 Mbps uplink per sector, and up to 75 Mbps uplink per sector for Category 5 UEs. The unit is capable of simulating UEs performing voice, video, and data calls over the Common Public Radio Interface (CPRI). The system combines the t600 microTCA chassis with the DTC2000 m500 test platform.
