

# Combo Flash Drive Features Dual Interface of USB 3.0 and SATA II

A-DATA Technology, the world leader in DRAM modules and flash memory products, launched the industry first ever combo flash drive N002 that features the dual interface of USB 3.0 and SATA II, designed to maximize data transfer speed to the ultimate. Adopting the industry-leading 8-channel architecture, N002 is able to boost transfer speed tenfold compared to ordinary flash drives with USB 2.0 interface by delivering up to ultra-fast 200 MB/s and 170 MB/s in sequential read/write performance respectively.

Ready to hit the market by January, 2010, N002 makes USB 3.0 a reality. It supports all latest platforms that come with USB 3.0 ports, while also being backward compatible with USB 2.0 ports at a lower speed performance. Available in 64GB, 128GB and 256GB, N002 is ideal for users who are thirsty for super-sized storage capacities with unrivaled speed via the innovative USB 3.0 and SATA II dual interface. A combination of speed, storage and portability altogether into one device, N002 is by all means the most effective solution to access and transfer large amount of data, including high-resolution images, multimedia files and whole lot more, at an instant and on the go.

Users can also take full advantage of A-DATA's free-download value-add software UFDtoGO and the latest Norton Internet Security 2010 (60-day trial) to enhance both mobility and security of their A-DATA USB flash drives with just few easy mouse clicks away.
