

PCBs Feature Mounted-in LEDs

Newark announced that it is the one of the first distributors to offer Printed Circuit Boards (PCBs) with Cree XLamp LEDs already mounted on them. The PCBs are sold under the SPC Technology label, one of Newark's brands. Cree's lighting class XLamp MC-E, XR-E, XP-C and XP-E LEDs are available on star boards or on round boards, with as many as 11 LEDs per board, for same-day shipping. Newark asserts lighting engineers no longer have to mount multiple LEDs to a board or line up a board house to do it for them, simplifying the design-in process.
