

NEMA 5-15 Cord Sets Feature Eight Plug Direction Options

Interpower Corporation offers angled NEMA 5-15 which present the user a choice of eight different angles in which the cord exits the outlet. The cord sets are designed for business, medical, or testing applications. The eight different plug options are helpful in reducing the clearance space required behind or under equipment. Angled NEMA 5-15 cord sets are for equipment rated up to 15 A with service at 125 VAC. They are UL and CSA approved. NEMA 5-15 cord sets are available with 3×18, 3×16, and 3×14 AWG cable in stock lengths of 6, 8, and 10 feet. Custom lengths, packaging, and labeling are available upon request.
