

2.4 GHz Antenna Provides Nearly Invisible Ceiling Mounting

L-com has developed a compact, 2.4 GHz multiple-input and multiple-output (MIMO) ceiling antenna designed to operate with many manufacturers' enterprise-class 802.11n MIMO access points (APs). This antenna features three integrated 2.4 GHz antennas in one enclosure, making it suitable to support applications in next-generation IEEE 802.11n wireless communication systems. This omni-directional antenna features spatial diversity between three independent antenna ports providing better wireless reception in areas susceptible to the affects of multi-path interference. At 5.8" in diameter, this antenna is no bigger than a typical smoke detector, making it desirable for use in offices, health facilities, educational settings and retail complexes.
