

Wireless Transmitters Suit Facilities with Existing WiFi Networks

Omega's new wSeries wireless transmitters for analog voltage and current, temperature, humidity and barometric pressure, communicate on a standard 802.11 b/g Wi-Fi network which is desirable for facilities with an existing Wi-Fi network as well as a new installation. The wSeries sends alarms through text message or email if variables go above or below a set point that users determine. The CE compliant product features a NEMA 4 (IP65) enclosure.
