

Precision Adapters Tout Metrology Grade Performance at Commercial Grade Price

Southwest Microwave, Inc. (SMI)

announced a full range of precision adapters, both within-series and between-series, encompassing SMA, SMA to N, 2.92 mm, 3.5 mm to 2.40 mm, 2.92 mm to 2.40 mm, SSMA to 2.40 mm, and 2.40 mm. The offering includes unique 0.9 mm to 1.85 mm. They present near metrology grade performance, referred to as Precision and are suited for applications requiring metrology type measurements where phase matching is not required. Each series is produced to the same electrical length. SMI adapters are asserted to provide an economical lower cost solution for critical production and test requirements. The company's adapters are designed based upon transmission line principles. They are appropriate for use as connector savers without compromising measurement accuracy. The adapters also are approved for satellite and other hi-rel applications.
