Power jack line is panel mount and allows for flexibility

Kycon added a high-current panel mount DC power jack option to their current series of power jacks. The expansion of the power jack line allows for design flexibility, with reliability in high-current and repetitive applications such as laptop computers, portable modems, and other portable devices. The new KLDPX-0302 Series is rated at 5 A, and it is available as 2.0-mm diameter and 2.5-mm diameter. Additional features include solder eyelets and a built-in On/Off switch.
