

NEMA enclosures are ready to install with UPS series

Falcon Electric, Inc. announced its new “ready to install” NEMA enclosures of any size with the company’s 1 kVA to 3 kVA SSG-RP Series wide temperature UPSs. The on-line double-conversion UPS and enclosure are UL, cUL and CE-listed to operate between -20°C to 55°C (SSG Industrial Series) and -30°C to 65°C (SSG Ultra Wide Temperature Series). These systems are typically found in many industries such as oil & gas, communications, manufacturing, power generation, utility and transportation applications. For the oil & gas industry, these enclosures are found at well-head sites, along oil transmission lines and at refineries. Inside the enclosure, the UPS is designed to swing-out 90 degrees so the user can easily control the UPS via the front panel of the UPS. Users can order an optional front panel that locks or one that simply secures the panel shut. The internal SSG Series UPS can be pre-configured to support domestic and global applications, as the SSG is available in both 120 VAC and 230 VAC (220/230/240VAC) models. In addition, all models feature auto-sensing frequency - matching output and input.

For generator applications, the SSG Series can be modified to “fix” the frequency on the output at 50Hz or 60Hz, so the fluctuating frequency from an auxiliary generator-set does not affect the UPS’s ability to act as a “bridge” when transferring to the generator during a power outage.

The SSG Series includes an RS-232 and USB interface, a cable and a Falcon UPSilon software driver which can be configured to shut down a number of operating systems. For industrial applications, Falcon offers a dry-contact communications option, a secure IPv6-based SNMP/HTTP option as well as a MODBUS

communications option so that if the UPS is on battery, low battery or experiences any internal failure, the network monitoring system will display the UPS condition in the network monitoring system's main console or graphical user interface (GUI).

Pricing starts at \$4,750.00 for a NEMA 3R enclosure with Falcon's SSG Series 1,500VA wide temperature UPS integrated.
