

Push-pull micro SIM connector suitable for 5,000 card insertion cycles

Connector manufacturer Global Connector Technology has developed a new economical push-pull Micro SIM connector to complement GCT established 'full size' SIM connector range.

Micro SIM cards have the same contact arrangement as traditional Mini SIM cards, however the reduced card size of .47" x .59" shows an 50% space savings in card footprint.

With 6 or 8 contacts, 0.100" profile and suitable for 5,000 card insertion cycles, the GCT Micro SIM connector is push-pull style, the card being held in place by contact force, there is a card stop for user ease.

SIM7050 is stocked by our global distribution partners Future Electronics and Newark.

SIM7050 is available in stock for rapid same day sampling. To speed up your design download 2D drawings and 3D models from our website.
