

Software tool enables bills of materials processing in hours

Adeon Software House has announced a new software tool, BOMArchitect, for the super-fast, hassle-free, validation and processing of Bills of Materials (BOM). Developed to meet the needs of electronics manufacturers BOMArchitect replaces the time consuming and repetitive process of reviewing BOMs with a high-speed process that takes hours, rather than days; minutes, rather than hours. Quotation and New Product Introduction (NPI) lead times are drastically reduced, delivering a significant reduction in time to market.

BOMArchitect is a revolutionary BOM processing technology that incorporates an advanced component information system. Quotation accuracy, speed and time to market are greatly improved by intelligently automating the BOM process. The new toolset enables EMS providers and their supply chain partners to use all available product information from internal and web based sources in a consistent and optimized manner, and with full privacy controls and security assured, BOMArchitect also shares information with full traceability.

Modular BOM Toolset

An open system, BOMArchitect seamlessly interfaces with all enterprise systems common to the electronics supply chain, and used in the product realization process (e.g EDA, ERP, PLM, MES). Reducing the BOM validating and processing time by 50% or more, engineers can achieve higher quality outputs as errors are

significantly reduced or eliminated. BOMArchitect fast tracks the quotation process and simplifies the tasks of part sourcing and purchasing, harnessing the value of the company's ERP data. Formal and informal Approved Manufacturer Lists (AMLs) form a dynamic part of the toolset's knowledge base, storing and maintaining all customer related part information data that is created.

Available now

Affordable and without requiring onerous capital expenditure approvals, BOMArchitect licenses start at EUR 1,200 for an annual subscription and are available in two versions. The single user module is built to meet the needs of EMS providers that need only one or two BOMArchitect licenses for their quotation and NPI processes. The multi user version is aimed at manufacturers of any size requiring multiple licenses across a global network. All subscriptions come with full support and online training video tutorials.

The product is exceptionally intuitive to use and engineers do become productive within hours. Interested users can evaluate BOMArchitect with a free, two-week trial version of BOMArchitect and access online training content before signing up.
